ICS 499: Capstone
Sprint 0[1] Deliverables

This sprint has been designed to be a team building exercise. It has 2 parts:

Part 1: Complete the team working agreement. It is posted to D2L in the week 1 folder. If you run out of space and would rather put the content into a Word document, that's OK too.

Part 2: By virtue of the course prerequisites, you should be able to create a state diagram for a checking account. Details are as follows:
- Be sure to out a title on this and ALL diagrams.
- If you have assumptions about your checking account, be sure to document them. For example: some checking accounts have overdraft protection. Consider other assumptions as well.
- You can use a drawing tool or hand draw it. If the latter, it has to be readable and scanned into a pdf.

I will go over the highlights in the next class.

---

[1] Technically, there is no such thing as a sprint 0, but I am not a purist.
